

## About

This project develops a housing market insights tool using Power BI, enabling users to screen properties in Austin, Texas based on their preferred criteria.

### Key Features:

- Data Presentation: Organizes and visualizes housing data effectively.
- Interactive Filtering: Allows users to refine searches based on specific preferences.
- Comprehensive Insights: Provides information across four key areas – General Information, Location, Schools and Features.

The primary focus of this project is to enhance data presentation and interactivity, ensuring users can explore and analyze housing options seamlessly.
