

Housing Market Insights Tool

1. Introduction

This project develops an interactive Power BI tool for exploring the housing market in Austin, Texas. It enables users to screen properties based on their preferred criteria, enhancing data accessibility and decision-making.

2. Methodologies

- Data Processing: Cleaned and structured housing data for efficient querying and visualization.
- DAX Calculations: Implemented calculated measures to support dynamic filtering and comparative analysis.
- User Interactivity: Designed an intuitive interface with slicers and filters for personalized property searches.

3. Key Components/Output

- Data Presentation: Organizes and visualizes property listings with relevant details.
- Interactive Filtering: Enables users to refine searches based on specific preferences.
- Comprehensive Insights: Provides information across four key areas:
 1. General Information – Displays basic property details such as price, size, and type.
 2. Location – Highlights geographical distribution and neighborhood characteristics.
 3. Schools – Presents school ratings and proximity to properties.
 4. Features – Showcases amenities, home features, and other relevant attributes.

4. Limitations and Future Improvements

- Data Coverage: The tool is limited to Austin, Texas. Future improvements could expand coverage to additional cities.
- Real-Time Updates: Currently relies on static data; integrating real-time property listings would enhance usability.
- Advanced Analytics: Future iterations could incorporate price trend analysis and predictive modeling for property valuation.
